

Saghar Asadi

DATA SCIENTIST

☎ (+47) 918 22 363 | ✉ asadisaghar@Gmail.com | 💻 asadisaghar | 🌐 asadisaghar

About

A creative geek, with a background in both academia and industry. Experienced in collecting, cleaning and analyzing large datasets, as well as creating dashboards and other visualizations for a variety of audiences. Designed and delivered many loosely-defined projects and worked hands on with various machine learning techniques such as regression, classification, neural networks and clustering.

Skills

- Python(5), nodejs(3), SQL(3), R(2), L^AT_EX(5), MATLAB(4), Cython(2), C(1)
- SKlearn(5), Pandas(5), TensorFlow(4), Keras(4), pySpark(4), OpenCV(4), Elasticsearch/Kibana(4), Matplotlib(4), D3(3), Django(2)
- Farsi(5), English(4), Swedish(3), Norwegian(2)

Positions

INNOVATION GARAGE AS - A MOONSHOT BY DIALOG

INNOVATOR (DATA SCIENCE)

Tromsø, Norway

Aug. 2017 - Present

SPEEDLEDGER

DATA NINJA

Göteborg, Sweden

Oct. 2016 - Jun. 2017

STOCKHOLM UNIVERSITY - Department of Astronomy

PHD IN ASTRONOMY

Stockholm, Sweden

Aug. 2012 - Sep. 2016

STOCKHOLM UNIVERSITY - Department of Astronomy

MSC. IN ASTRONOMY

Stockholm, Sweden

Sep. 2010 - Jun. 2012

Shahid Beheshti University - Department of Physics

BSC. IN PHYSICS

Tehran, Iran

Sep. 2005 - Jun. 2009

Results

- Developed Elasticsearch data ingestion and embedded data processing and visualization for GeoCloud, a position tracking service for vessels (InnovationGarage AS)
- Performed various data analysis and visualization projects for different departments (InnovationGarage AS)
- Co-developed a ZenDesk bot using natural language processing to help automate support ticket resolution for Dialog (InnovationGarage AS)
- Developed a semi-automatic video labeling tool to speed up generating training data for computer vision projects (InnovationGarage AS)
- Worked with product management team to use customer behaviour analysis for future product development planning (SpeedLedger)
- Built an app to monitor the company internal data flow, making customer data reliably consistent across departments and software systems (SpeedLedger)
- Developed and visualized performance metrics for multiple departments (SpeedLedger)
- Organized the first graduate-level machine learning course across physics and astronomy departments (Stockholm University)
- Wrote simulation software for the first Swedish SETI project (Stockholm University)
- Presented the results of my research to both professional and public audience (Stockholm University)
- Developed data analysis methods to optimize the sensitivity and resolution of radio interferometers with the end goal of constraining the mass of dark matter particles (Stockholm University)
- Made simulations to estimate the ability of near-future radio interferometers to constrain the standard model of dark matter (Stockholm University)
- Organized numerous science outreach programs from the age of 15 (2001–2016)
- Supervised physics and astronomy projects at various high schools (2006–2010)

Interests

Science outreach, amateur astronomy, long distance running, gardening
